

Climate change data

We provide high value climate data adapted to the assessment of physical climate risk to ensure the resilience of your activities.

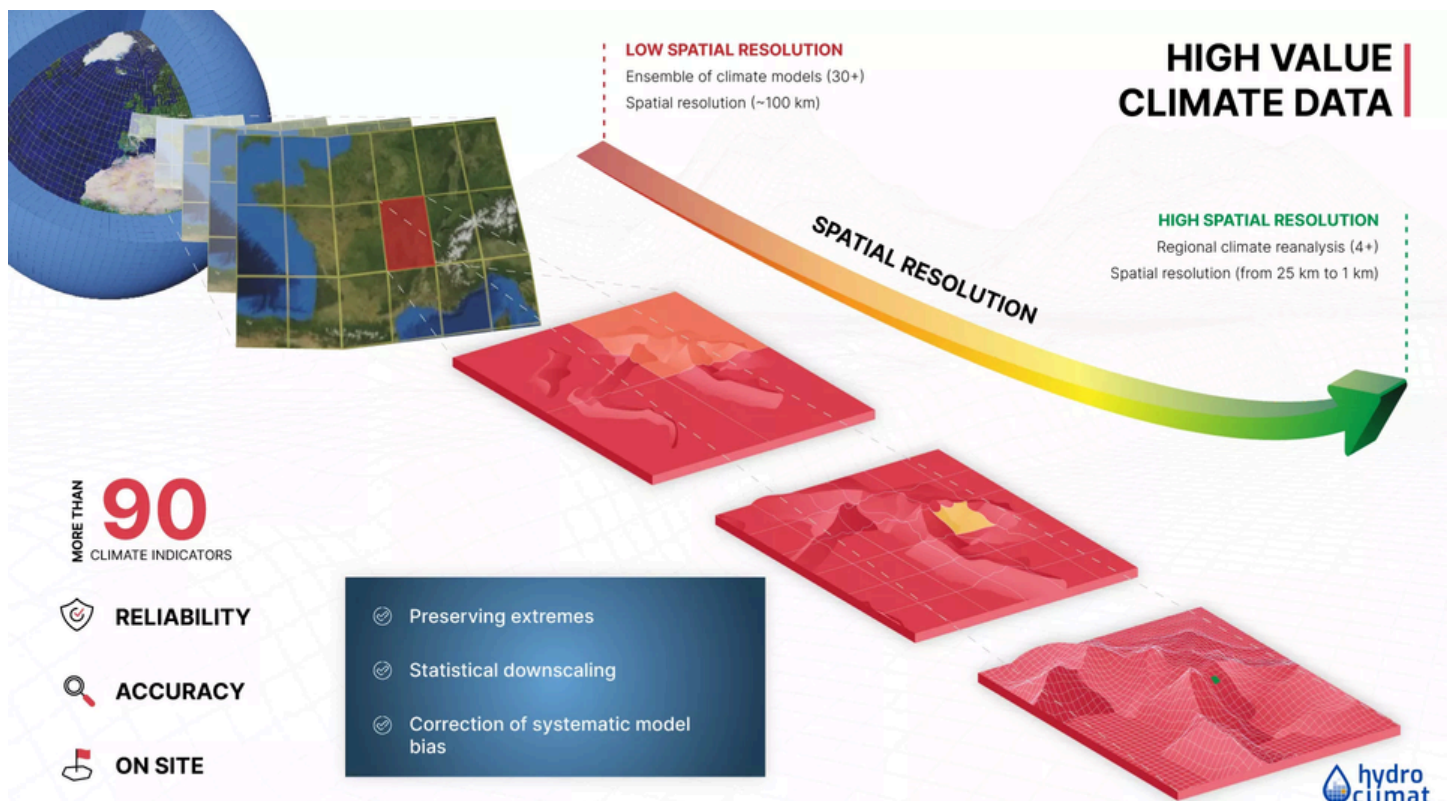

Why us ?

Hydroclimat is a committed company, aware that any structure or territory is vulnerable to physical climate risk. We offer actionable data to protect your assets, reduce material losses, and ultimately ensure resilience. With this focus, we stay informed on the latest regulations (TRACC, CSRD, European taxonomy, and TNFD) to deliver accurate and up-to-date climate data tailored to your needs.

Who ?

The climate data we provide are intended for local authorities as well as financiers and insurance, infrastructures sector, farmers, or water management.

How ?

Climate change data

What we offer

Qualified climate projections

Different variables and spatial resolution

Climate indicators

TRACC (FR)
CSRD (EU) / EU taxonomy
Sizing

Climate score

Impact of a climate indicator on a defined environment

The benefits offered by our service

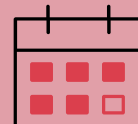

Geographic coverage

France, Europe and International

Future horizons

Flexible between 2025 et 2100

Reference periods

Flexible between 1971 et 2015

Very high spatial resolution

Up to 30 m or site specific

Climate model

Bias-corrected CMIP6 models

Climate scenarios

SSP1-2.6 (+1.8°C), SSP2-4.5 (+2.7°C), SSP3-7.0 (+3.9°C), SSP5-8.5 (+4.4°C)
